-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Makamura et al. (4,798,050).

In figures 1, 5, and 7, Nakamura et al. teach a fan revolution speed control method comprising steps of: detecting a temperature of a cooling target fluid, and controlling the fan revolution speed of a cooling fan of a cooling system for cooling said cooling target fluid so that: when the flow rate of said cooling target fluid passing through said cooling system is high, the fan revolution speed of said cooling fan is controlled to achieve a target fan revolution speed in order to bring the detected temperature to the same level as a preset target temperature, and that when the flow rate of said cooling target fluid becomes lower, the fan revolution speed of the cooling fan is controlled to achieve a new target fan revolution speed that is lower than said target fan revolution speed.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Bong-dong et al. (5,251,440).

Art Unit: 3745

In figures 1-7, Bon-dong et al. teach a fan revolution speed control method comprising steps of: detecting a temperature of a cooling target fluid, and controlling the fan revolution speed of a cooling fan of a cooling system for cooling said cooling target fluid so that: when the flow rate of said cooling target fluid passing through said cooling system is high, the fan revolution speed of said cooling fan is controlled to achieve a target fan revolution speed in order to bring the detected temperature to the same level as a preset target temperature, and that when the flow rate of said cooling target fluid becomes lower, the fan revolution speed of the cooling fan is controlled to achieve a new target fan revolution speed that is lower than said target fan revolution speed.

#### ***Prior Art***

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consist of one patent.

Denbraber et al. (5,564,274) is cited to show a temperature control based on an power output of a hydraulic system.
